The program can retrieve information concerning WMI classes or activities and display information about the selected class in the main window. The application is available as a stand-alone, portable version. When installed, it will appear in the Windows "Start" menu, but can also be executed from the Start menu. Information about the selected class is shown in the main window. Once you select a WMI class, properties are neatly displayed in the main window. Information is organized in the following tabs: General Tab: As more and more system applications use WMI for their operation, the ability to extract information about the system is important. WMI Informant gives you a helping hand in getting informed about the WMI classes and extracting data concerning various system configuration areas. Its interface is neatly organized and using it shouldn't pose any problem. However, the information it retrieves is mainly dedicated to advanced users and programmers, since a b7e8fdf5c8

KDW Microbe Grid, a promising advanced Web browser geared toward molecular biology practitioners, launches with new features that help customers quickly and easily access almost all aspects of their research. Today, molecular biologists are faced with challenges to effectively manage and analyse their increasingly large data sets. Helping researchers to quickly navigate, search, and analyse increasingly large data sets is essential for the success of molecular biology research projects. KDW Microbe Grid provides the simplicity of accessing a single Web browser for molecular biology. It also includes the query power of KDW Microbe. It's a comprehensive research tool to address the challenges of managing large data sets, searching and displaying data, and navigation across an extensive data network, all from a single computer. Agencia Nacional de Telecomunicaciones (ANTEL) and the National Institute of Standards and Technology (NIST) Technology Transfer Engineering Center (TREC) signed a Memorandum of Understanding (MOU) to move the technology developed under the former's Co-Responsibility Program between the National Standards and Measurements Institute (ENIM) and NIST. The Agreement was signed last week in Chile by Dr. Maria Luisa Casal and Mr. Luis Seoane of ANTEL and Dr. Joseph O'Sullivan and Mr. Ian Compton of TREC. The project started on Sept. 16, 2008, and will end on Aug. 31, 2011. The MOU will sponsor the technology transfer and the exchange of expertise between the two institutions. The MOF will provide educational materials such as workshops and trainings about the Co-Responsibility Program and its technology transfer. According to ANTEL and NIST, the communication network of Chile's government and private sector is at a constant risk of failure. This is because the communication infrastructure is not sufficiently reliable for supporting critical services such as the Transportation, Finance, Energy and National Tourism. The MOU is one of several agreements signed by NIST and ANTEL last week, which recognize the importance of the open standards development process. Through this process, NIST and ANTEL will work on interoperability tests of two important technologies for Critical Infrastructure Protection: two-way authentication between encryption devices and automatic identification of vehicles. NIST and ANTEL already have a Memorandum of Understanding with the US Department of Homeland Security on the two-way authentication of encryption devices. The two standards will aim to simulate a realistic scenario in which a commercial encryption system, that provides the
